Hi all,

I wrote the following code in 2023 to import percent of pregnant women who slept under a treated tent by subgroups for all surveys from 2006 to 2022. I've successfully run it as recent as May 2024.

```
import delimited using ///
" http://api.dhsprogram.com/rest/dhs/data?surveyYearStart=2006
&surveyYearEnd=2022&breakdown=all&indicatorIds=M
L_NETW_W_ITN,&returnfields=surveyId,DHS_CountryCode,Coun
tryName,SurveyYear,SurveyYearLabel,SurveyType,FieldworkStart
,FieldworkEnd,indicator,IndicatorID,value,IndicatorData,Char
acteristicLabel,CharacteristicCategory,Footnotes,ByVariableI
d,shortname&f=csv&apiKey=GUTTMA-130129,perpage==5000", clear
```

Today when I run the code, the attached error occurs, indicating that the file has permanently been redirected but no new location given. Admittedly I was a new API user and after such a long time of not having to work with it, I really don't know how to debug this. Any assistance would be greatly appreciated.

Thanks much

I was able to run the code without much trouble, but with a couple of minor corrections:

1) Make sure there are no spaces in the URL (the userforum adds spaces sometimes - just remove them). Remove the space before HTTP, and remove each of the other spaces that are shown.

2) The perpage setting should have only 1 equals sign.

I'm attaching a file with the corrected version.
