Hello everyone!

I am not able to find in the individual nor the children recode information about the feeding practices of the mother in Bangladesh (e.g. if she had fish, eggs, milk, etc.). There is only information available for the children. Are these variables in any other file? I read in the recode manual of 2017-18 DHS that the feeding practices questions of the mother are no longer part of the core questionnaire, but they are kept in the recode. As a matter of fact, when I opened the dataset, the variables were there but without observations. In other words, these questions were not asked to the mother in any Bangladesh's DHS? Thank you!
