Hello,

I know there are already posts on this issue (I went through this one: https://userforum.dhsprogram.com/index.php?t=msg&goto=24727&&srch=merging+BR+and+PR#msg_24727).

But I have a different issue. My outcome variables are child mortality indicators (under five, infant, post-neonatal, etc.) and I want the household-level information of these children (some relevant household-level information is not given in the BR file). But because their line number is not given and we are supposed to drop them before merging with PR, how will I be able to get the required information.

Please help because it is urgent.

Thank you.

Hello,

Some response would be helpful.

Thank you.
