I applied for a project on child anaemia on the DHS website, covering all DHS surveys with available GPS data. When I downloaded the data, I found that I could obtain GPS information for at most 150 surveys across 46 countries. However, some articles, such as the one with DOI 10.1016/j.oneear.2025.101424, mention that they obtained GPS data for 59 countries. How can one maximize access to GPS information for all countries?
