What is Vidalista 20?

Vidalista 20 contains Tadalafil, a PDE5 inhibitor that increases blood flow to the penis, helping men achieve and maintain an erection when sexually stimulated. It is known as the "weekend pill" because its effects can last up to 36 hours, offering flexibility compared to other ED treatments.

Diabetes affects blood vessels and nerves that are essential for sexual performance. Key factors include:

High blood sugar levels damaging small blood vessels.

Neuropathy (nerve damage) affecting arousal signals.

Reduced testosterone levels, common in diabetic men.

Poor circulation, making it harder to sustain erections.

Improves Blood Flow Helps overcome circulation issues caused by diabetes.

Supports Long-Lasting Performance Effective for up to 36 hours.

Boosts Confidence Restores intimacy and reduces performance anxiety.

Convenient Dosing Taken once as needed, with or without food.

Standard dose: 20 mg, taken at least 3060 minutes before sexual activity.

Maximum frequency: once per day.

Works best with proper diabetes management (diet, exercise, medication).
