Subject: Preceding birth interval
Posted by owraza on Mon, 01 Sep 2014 10:17:25 GMT

I want to use 'preceding birth interval' as a predisposing factor for poor immunization coverage among 12-23 months old child. Can you suggest me which variable should I use, because there are two variables HC63 [1 to 15] & B11 [1 to 20].

Regards.

If you are using the immunization data, you should use B11 with the H1 to H10 series of variables. If you use the children under five's recode (KR) file you will find these variables.
