Hi,

I want to work with CAUSES OF DEATH IN CHILDREN UNDER AGE 5. how can i find the variables (causes of death) that used in "Table 14.1: Causes of death among children under five by age group" of BDHS-2011 report.

regards,
Shafiur

The cause of death data are found in the Verbal Autopsy (VA) dataset. These were analyzed with the children's recode (KR) file dataset for the tabulations in table 14.1.
