Dear all,

I am looking for the NUMBER OF CHILDREN UNDER-FIVE by household wealth for my Concentration Index calculation. I wonder if someone can tell me exactly what indicator to choose from the statcompiler. Your response will be highly appreciated.

Do you need live births in the last five years or number of living children currently under age 5. Try this link: <http://statcompiler.com/?share=43176982D37>

It gives the live births in the last 3 and last 5 years and the number of living children under 3 and under 5, each by wealth quintile.

Thanks a lot for your reply. I needed number of living children currently under age 5. I got it from the vaccinations by background characteristics. Thanks again!
