Hello,

I make a study on the impact of electrification on health using the Ghana 2008 survey.

I have two questions :

1) I read the report which contains child health stats nevertheless i didn't find the file to use (even the children recode one) to get these variables, can you tell me what is the recode file used and the relevant variables please?

2) I want to calculate teh nearest distance to health facilities, is there any relevant variable? If there is, where is it (recode file) please?

Thank you in advance for your attention.

Sincerely yours

keïssa

Dear User,

There is no variable giving distance to health facilities.

Thank you!
