
Subject: Exclusive breastfeeding in Zambia 2013-14 dataset

Hello,

I am working with the Zambia 2013-14 datasets -- and have a question about determining breastfeeding rates.

Similar to Table 11.3 in the report, I'd like to calculate what percentage of children are exclusively breastfed (by maternal age, hence my need to use the data rather than figures from the report).

The Guide to DHS Statistics, on page 123, states that exclusive breastfeeding status is determined via a 24-hour recall.

But, in the Zambia dataset I downloaded, the variables that seem like they would indicate this -- v407 and v408 in the ZMKR61FL.DTA file -- are marked "na" and are all missing values.

Can you help me figure out how to replicate the values from Table 11.3 in the report, using the data that are available?

Thank you!

One of our Data Specialists is working on a response to your post. We will post again, as soon as we have something ready for you.

Thanks for your patience.

I am doing the same thing using Nigeria 2013, and unfortunately, my figures don't match those on the DHS report, even the number of the children, although I did both unweighted and weighted (using the sample weight V005/1000000, according to the manual). Could you please help

Can you post your Stata code and output?

I'm also not getting figures in the report. Believe I'm doing something wrong. I'm trying to replicate Table 11.3: Breastfeeding status by age using Ghana DHS 2014 (children file). This is how I started with Stata:

```
keep if midx==1&b9==0&hw1<24
tab hw1
recode hw1(0/1=1 "0-1")(2/3=2 "2-3")(4/5=3 "4-5")(6/8=4 "6-8")(9/11=5 "9-11")(12/17=6
"12-17")(18/23=7 "18-23")(24/59=.), gen(child_age)
tab child_age
tab child_age[w=v005]
```

But the result of the above did not correspond with the report figures. Any help on that and how to proceed to replicate Table 11.3: Breastfeeding status by age.

Thanks

I realise this is a slightly old thread but was there ever a response and code posted for how to calculate exclusive breastfeeding in the ZDHS?

Dear User,

Here is a great response from another user on the forum on how to calculate exclusive breastfeeding

in SPSS [http:// userforum.dhsprogram.com/index.php?t=msg&th=294&goto=9098&S=8173c8a90aa03660575dcfb39a84959d#msg_9098](http://userforum.dhsprogram.com/index.php?t=msg&th=294&goto=9098&S=8173c8a90aa03660575dcfb39a84959d#msg_9098)

In Stata [http:// userforum.dhsprogram.com/index.php?t=msg&th=294&goto=8761&S=8173c8a90aa03660575dcfb39a84959d#msg_8761](http://userforum.dhsprogram.com/index.php?t=msg&th=294&goto=8761&S=8173c8a90aa03660575dcfb39a84959d#msg_8761)

You will need to substitute your survey information. You can also refer to The Guide to DHS Statistics which can be downloaded from our website: [http://](http://www.dhsprogram.com/publications/publication-dhsg1-dhs-questi)

www.dhsprogram.com/publications/publication-dhsg1-dhs-questi onnaires-and-manuals.cfm

starting on Page 124. If you still have questions, please feel free to post again. Thank you!

Dear arisb,

Please see message 9295 where I had earlier responded to tony's question (he had posted in two places).
