Subject: SPSS code to compute infant and under-five mortality Posted by user001 on Mon, 11 May 2015 09:37:52 GMT View Forum Message <> Reply to Message

Hello,

I understand that this topic has already been raised, and I did find SPSS syntax on this forum to compute the mortality rates. Though, the SPSS do-files do not seem to be working properly. Is it possible to get updated SPSS codes to compute infant mortality and under-five mortality, which are applicable to all the latest DHS data sets? Many thanks in advance for your help!
