I am trying to use the India data to calculate ASFR and TFR for different subpopulations and I need to create all woman factors for each one. Can someone help me with SAS or STATA code to do this with the HH surveys? I get the basic equation but am having difficulty with calculating these given that HH surveys contain information on several women in same HH.

Thanks,
Alka

Dear User,

You may want to access the following resources to help you in your analysis:

The Guide to DHS Statistics

http://www.measuredhs.com/pubs/pdf/DHSG1/Guide_to_DHS_Statistics_29Oct2012_DHSG1.pdf

and the Standard Recode Manual

http://www.measuredhs.com/pubs/pdf/DHSG4/Recode6_DHS_22March2013_DHSG4.pdf In the Guide to DHS Statistics, the bookmark for Fertility will help guide you in your analysis.
