Burundi DHS 2010:

I want to know the provinces but the Burundi DHS 2010 provides only the regions as: north, south, west, central-east and Bujumbura but without specifying in which provinces the survey took place. For my analysis, I need the names of the provinces, such as Gitega, Ngozi, Makamba, Bubanza, etc.

I opened the GPS dataset and did not find them. May be I have access to the wrong document!

Thank you for your reply.

You are correct the provinces for Burundi are not available in the main household datasets or in the GPS dataset. This is because the survey is not representative at that level of analysis. However, if you would like to identify the province for the cluster locations you can use the spatial join tool in a GIS software to assign the province for each cluster GPS location using the GPS dataset.
