Subject: DHS in SAS
Posted by ellerayelle on Tue, 27 Oct 2015 15:00:56 GMT

Hello! I am relatively new to SAS and was wondering if someone could help me figure out how to collapse variables into one? For example, I am trying to combine women's age variables from HV1_1 to HV_7 into one column in SAS so that I can reconfigure the dataset into something more manageable for analysis.
Thanks!
