Hello,
Does anyone know of a resource that has compiled the correct strata variable for each survey? I would like to write some code that will correctly assign the strata for each survey when running code over multiple surveys.
Thanks,
Kristin

PS If anyone does have this information, I am going to write code for both Stata and R to set the survey design, and will be happy to share this code on the board.

Your post is being reviewed by a DHS Team Member, and someone will respond soonest.

Thanks for your patience.

Hi kbietsch,

I think I'm going to be doing something similar for a subset of the surveys in Africa. Did you get around to doing this? (or if an established resource already exists?)
