Dear Forum experts,

I would to request for insight on the measurement of nutrition score.

I would like to know 1) How the NS was calculated,

2)For Bangladesh BDIR dataset, nutrition score ranges from 0 to 15. Is there any specific guideline/scale for classification of NS as low, moderate, good.

Thanks in advance for sharing your insight!

1) See message 4128

2) See the Bangladesh DHS 2011 report, page 195, and the reference (Coates et al, 2007)
