Hi,

I want to use Indonesia DHS 2012 as my secondary data for my research. I have got access to use the data. However, I can't open the Stata file as it has too many variables for what my version of Stata allows (though I currently have the most up to date version). Is there any datasets that just have variable related to characteristic, demography and maternal mortality or the small version of women datasets?

Thanks

Dear Resty,

I believe Dr. Pullum has resolved your issue with accessing your dataset. Thank you for your post.
