Hi,

In Pakistan DHS 2012, the factor weight file has 11142 on the Common tab while the SPSS dataset has 12943 respondents in total. Similarly the urban number of respondents differ (Excel factor weight file= 5520, SPSS = 6335)

Could you let us know why this is and whether we can use the factor weight file as it is?

Thank you for all your help,

Kenzo
