Dear DHS team

Greetings,

My Research objective is to investigate the impact of socio-demographic characteristics on the prevalence of hypertension and diabetes(/ type 2). For this purpose, I am going to conduct a multivariate meta analysis of these two outcomes across 10 to 15 countries.

But, I am facing some difficulties to identify which countries have the following information (in a dataset):

- 1) Anthropometry.
- 2) Blood pressure (measure)
- 3) Blood pressure questions
- 4) Diabetes questions
- 5) fasting blood glucose

I am going through the Final Reports which seems a cumbersome process.

Would you like to tell me the countries with year (Asia and Africa) which have these information ?

Thanks

Ansari

Okay.

The problem is solved now. I have dropped an email to measuredhs.com and the reply brings the solution of my question which is in the following link:

<http://http://www.dhsprogram.com/What-We-Do/Survey-Search.cfm>

Thanks DHS Team.
