In the women's questionnaire in the 1995 survey, what is the difference between variables s911y and v730? The tabulation of both variables give different results.
Thanks.

As the variable labels indicate, S191Y is the year of birth of the husband, and V730 is the age of the husband/partner.

S911Y: Date birth of husband (year)
V730: Partner's age
