I am using Bangladesh DHS survey data,2014 for my thesis paper. I am using household record file for measuring BMI of ever married women.In the time of data analysis, I have found same variables with consecutive number ,for example : ha1_1, ha1_2, ha1_2...whereas ha1 denotes woman's age in years.What does it mean by additional numbering.I am expecting your valuable answer.

Thank you in advance

There are several discussions on the forum on "multiple occurrence variables". Once such discussion can be found at post 3164.
