Dear DHS forum
I come for any support for Burkina Faso 2010 DHS
-maternal mortality
-antenatal care coverage
-skill birth attendance coverage
-family planning coverage
-HIV testing
-Bed Net use

I would like to aggregate these indicators at cluster (census tract) and district level.
Thanks for any support!

Dear Liz,
Lot of thanks for your reply and these documents facilitated me lot of computation. However, I am still in trouble about two information
1- the number of currently pregnant women: if i used the IR file (v213) i get 1730 and if i used the PR file (hml18) i get 1748 and the number in the report is 1738
2- the number of women that have post natal checking within two days: the total that have the

checking is ok as in the report (5988) but the problem is the number of women within two days because of the codification that i did not get well.

I am using the Burkina Faso 2010 DHS and also used Stata for my analysis.

I am grateful to all those who will help me to calculate this data

Best!
