Hello

I am working on the Jordan family and health survey (DHS 2012) and would like to know in which district and Sub-district each cluster is located. This information does not appear in the dataset (only numbers).

I know the sampling is done to be representative at the governorate level and would also be happy to know the margin of error for estimates at District level.

Best

Hello,

In order to identify the district or sub-district in which each GPS cluster is located, you'll have to link the GPS data to the district files as there is no other way to identify the district. The codes in the files are survey-specifically generated and not the official country codes; we do not have the codebook.

Here is another post on the User Forum with more information:
