Hello,
I received a strange error message from SAS when I attempted to read in ZWCR62FL.
Please see the attached messages.
Can someone assist at their earliest convenience?

Hello all,
For those of you using SAS and DHS data, I found this note on my error for Windows users. I used the method below and the problem was solved!

" Your SAS session should be invoked with UTF-8 encoding in order to avoid the NOTE and ERROR.

To invoke SAS using UTF-8 encoding on Windows, do one of the following:

(Unicode Support).

From a desktop icon, do the following:

Right-click the SAS icon and select Properties. On the Shortcut tab, in the Target line, add the desired configuration file (with the complete path) to the end:

```
-config "C:\Program Files\SASHome94\SASFoundation\9.4\nls\u8\sasv9.cfg"
```

Click OK."
