# Subject: Fertility Indicator <br> Posted by lka035 on Wed, 11 Jan 2017 17:39:04 GMT <br> View Forum Message <> Reply to Message 

I am having challenges in reproducing the mean number of births to women for the 5 different age groups in the 2007 Zambia DHS. This is for Table 4.2 on Page 57

Any assistance would be appreciated -- thank you!

A response from Dr. Shireen Assaf, Quote:
Hello,
Table 4.2 of the Zambia 2007 Final report does not have mean number of children ever born by the $5-y r$ age groups. However the code below can be used to match the remaining background variables.
use ZMIR51FL.dta, clear
gen $w t=v 005 / 1000000$

* overall mean of 6.5 for women $40-49$ as in the Table mean v201 if v012>39 [iw=wt]
* by wealth categories, for other categories just change v190 to the other variable names (i.e. v025, v106, v024) mean v201 if v012>39 [iw=wt], over(v190)
* not in the table but mean by $5-\mathrm{yr}$ age groups mean v201 [iw=wt], over(v013)

Thank you,
Best,
