Hello
I need to match data set of dataset of Individual Women Data (individual recode) and Household Listing Data (Household member recode) in only data base. How could I do it? Which variable identify each woman in household member recode?
Any assistance would be appreciated. Thanks!

Following is a response from Senior DHS Stata Specialist, Tom Pullum:

The id variables in the IR file are v001, v002, v003, which correspond to hv001, hv002, hvidx in the PR file. If you need more help, please identify which country and survey you are using.
