Dear Editor,

I am working on mapping HIV infections among pregnant women in Zambia. The Data I accessed from DHS site provides two separate datasets. One which shows status, while the other shows the data on general known covariates. I need to access data that links the two data sets, so that I can model factors predisposing women to HIV infections.

I am also modelling HIV infections among adolescent patients, the same situation goes for this age group. Please help me link HIV status to the covariate data set.

I will appreciate your help.

Kind regards

Dear User,

Please take a look at the section on merging data sets on our website.

http://dhsprogram.com/data/Merging-Datasets.cfm#CP_JUMP_8048

After reviewing this section, if you still have questions, please feel free to post again. Thank you!
