Dear Editor,

Iam working on mapping HIV infections among pregnant women in Zambia. The Data i accessed from DHS site provides two separate dataset. One which shows status, while the other shows the data on general known covariates. I need to access data that links the two data set, so that i can model factors predisposing women to HIV infections.

Iam also modelling HIV infections among adolescent patients, the same situation goes for this age group. Please help me link HIV status to the covaraite data set.

I will appreciate your help.

Kind regards

Dear User,
Please take a look at the section on merging data sets on our website.
http://dhsprogram.com/data/Merging-Datasets.cfm#CP_JUMP_8048
After reviewing this section, if you still have questions, please feel free to post again. Thank you!
