I am studying the effect of expansion in education on domestic violence. I am using both the female and the male datasets to study the effect of free primary education policy on educational outcomes and now I want to study the effect of increased education (in both men and women) on domestic violence. Since I need to match men and women in order to use each couple as a unit of analysis, I was wondering if data on domestic violence are available also in the couples' dataset in order to avoid the matching between the individual datasets.

Dear User,
We do have Couples files available as part of your downloads. If data on Domestic Violence was collected for a particular survey, they would appear in the Couples file.
We now also have some new YouTube videos to help users work with our data. They may be of interest to you. They can be found here:https://www.youtube.com/playlist?list=PLagqLv-gqpTMU3avlnBDodTWCazUR_y4CT
If you have additional questions, please feel free to post again.
