Hello! I am using Tanzania DHSVII 2015-2016 data, and I for some reason cannot figure out where I can find the age of the female respondents in the Individual recode.

First, I want to confirm that

1. Individual recode ONLY includes women since it is not labelled women

Next, I see that HV105 is the age of the household member but I am doubting that is the simplest way to see the age of the individual in the individual recode? I feel like I must be missing something obvious.

Thank you!
