Dear all,

We are trying to reproduce the results for antimalarial drugs used in Afghanistan 2015 (table 12.9), however, all variables for calculate this indicator are missing in the KR dataset.

We are using the dataset version 70. Is it possible that the results were calculated in the older version?

Thank you in advance!

A response from malaria expert, Cameron Taylor:

Quote:

Dear user,

Do you mind expanding on which variables you were trying to use? The variables are populated in the AFKR70FL.DTA dataset.

The antimalarial variables are ml13a-ml13h. If you use these variables you will match the final report.

Regards,

Cameron
