Dear All,

I am trying to perform decomposition of concentration index by using DHS data. I need to calculate elasticity, concentration index, absolute contribution and percent contribution. Can anyone help me to calculate these? Step by step procedure to calculate my desired analysis much appreciated.

Thnks in advance.

Following is a response from Senior DHS Stata Specialist, Tom Pullum:

This question is not specific to DHS. Perhaps other forum users can answer it or give a link. DHS staff will not be able to provide an answer.
