Hi,

I would like to check, that the 2015 and 2016 continuous surveys for Senegal can be combined to be representative for 14 regions? Previously there was a final report for 2012-14 combined, but there appears to be no 2015-16 report for when these two datasets are combined.

Thanks,
Sophie

You are correct that the 2015 and 2016 data can be combined to be representative for 14 regions. There is no separate report, but tabulations for the 14 regions can be found in ANNEXE F : RÉSULTATS RÉGIONAUX (2015-2016) in the 2016 report.

Thanks for your response.

Please can you advise if the age structure for 2015-16 are available to view anywhere?

Thanks

I don't believe this is presented anywhere, but table 2.7 and figure 2.2 in both the 2015 and 2016 reports provide the age structures separately, and the combined 2015-16 would be pretty similar, and you could calculate it from those two tables.
