Subject: Weighting in Namibia 2013
Posted by saf204 on Fri, 15 Sep 2017 01:51:33 GMT

Hi all.

For Namibia 2013, I've merged the person recode with the men's dataset to track down the men's individual sample weights. However, when I merge into the PR dataset, I am missing quite a few men's individual sampling weights.

```
use "c: /NMMR61FL.dta", clear
rename mv001 hv001
rename mv002 hv002
rename v003 hvidx
gen in_IR=1
sort hv001 hv002 hvidx

save "c:/NMMR61FL.dta", replace

use "c: NMPR61FL.dta", clear
gen in_PR=1
sort hv001 hv002 hvidx

merge hv001 hv002 hvidx using "c:/NMMR61FL.dta"

tab1 _merge in_PR in_IR

keep if in_PR==1 & in_IR==1

tab _merge
drop _merge
```

Am I missing something here? Thanks!
