---

Hi, I've been trying to replicate the 12 months physical or sexual violence estimates for Dominican Republic, using stata, but I've been unable to do it. I need to make some cross tabulations mixing region, wealth quintile and education variables.

I tried re-coding the variables d105a-d105k (excluding d105g) I made 3 = 0 and 4 2 = 1. And then I tried recreating d106, d107 and d108.

Physical violence gives me 14.87% but the statcompiler shows 15.1%, sexual violence gives me 4.23% but the webpage shows 4.4%. Could anyone help me? Thank you.

```
foreach x in a b c d e f h i j k {  
  recode d105`x' (3 = 0) (4 2 = 1), g(d105`x'_re)  
}
```

```
g d106_x=d105a_re  
foreach x in b c j {  
  replace d106_x=1 if d105`x'_re==1  
}
```

```
g d107_x=d105d_re  
foreach x in e f {  
  replace d107_x=1 if d105`x'_re==1  
}
```

```
g d108_x=d105h_re  
foreach x in i k {  
  replace d108_x=1 if d105`x'_re==1  
}
```

Dear User,

Can you please specify which Dominican Republic survey you are referring to?

Thank you!
