Dear experts/analysts,

I am in confusion how to create stata command for combined PNC care for home and health facility delivered mothers as well as babies within 2 days of childbirth. It takes three variables at a time (HF delivered, home delivered and PNC within 2 days) Actually I am looking stata command for figure 9.8 of page number 159 the 2016 Nepal DHS report.

I also want to consider antenatal,childbirth and postnatal history of mothers who have lived childbirth and no neonatal deaths.I want to exclude all miscarriage, still birth, neonatal deaths in my analysis. For this,I am using "BR" file instead KR or IR files. Is BR file appropriate for this analysis?

Thank you
