Hello,

I am trying to reproduce:

Users informed about side effect or problems of method used

Users informed what to do if experienced side effects

Users informed about other methods

Do I need to use v3a02 v3a03 v3a04 v3a05 v3a06?

Along with v337 to determine if a woman began using a method over 5 years ago?

I have been unable to perfectly reproduce the numbers in the Afghanistan 2015 report (Table 7.8)

Thanks!

Kristin

Dear User,

A response from data processing specialist, Mr. Fidele Mutima,

Quote:

For Informed choice, Table 7.8, the 2015 Afghanistan DHS, the following variables were used:

- Percentage who were informed about side effects or problems of method used: V3A02 = 1 or V3A03 = 1
 - Percentage who were informed about what to do if experienced side effects: V3A04 = 1
 - Percentage who were informed by a health or family planning worker of other methods that could be used: V3A05 = 1 or V3A06 = 1
-

I want to recreate Informed choice table for India (table 5.11). Please share what filter to be used?

Currently, I am using Women who use current contraceptive method (only sterilization/PPIUCD/IUCD/Pill) (v312) and source of the current method (v326) and use within 5 years (v337<61). for weight I am using

generate wgt = v005/1000000

tab var [iweight=wgt]

Please reply.

Dear User, please refer to The Guide to DHS Statistics.

Quote:

Informed Choice

Percentage of current users of selected contraceptive methods who were informed about side effects or problems of the method used, what to do if they experienced side effects or problems, and who were informed of other methods of contraception that could be used

7.26
