Hello:

I am using a pooled DHS (INDIA) -- 1992, 1998 and 2005 combined dataset. I would like to create older siblings variables. I have the following variable: bord, v218(# of living children). However, I would like to specifically create the no. of older sisters, no. of older brothers of the ith child. Any leads or help is much appreciated!. I'm using the Child's recode files.

Thanks!
