Dear All

There are three variables related to migration v102 (types of place of residence), v104 (years lived in the place of residence) and v105 (place of previous residence). My concern is that how I can compute migration direction such as urban non-migrants, urban to urban, urban to rural) using v102 and v105.

Dear User,
Please refer to The Standard Recode Manual https://
dhsprogram.com/publications/publication-DHSG4-DHS-Questionna ires-and-Manuals.cfm. You
will also find specific information regarding your particular dataset in the Word document
distributed with your dataset when you downloaded. If you still need assistance after reviewing
these resources, please feel free to post again. Thank you!
