Hey!
Does anyone know more about 'Marital Control by Husband' questionnaire?

For example, who created this way of behavioural control assessment? What is a way to measure it and is there any scale with explanations (if answered yes to one of the statements then it means that woman experiences a low level of marital control and if answered yes to 3 or more then she experiences a high level of marital control? Unfortunately, this is only my guess and I will be very grateful if you can provide more information on this assessment.

Thank you!
