Hello,

I have a problem with running Chi2 considering weights in STATA.

I am using 2015-16 MDHS, Myanmar (br.file) and running chi2 for v106(education) and b5(child death) considering weighting.

I have already done svy set (generate wgt = v005/1000000 svyset [pw=wgt],
psu(v021)strata(v023)) as recommended.

However, it shows error when I used chi2 testing (weighted)..

The command that I used is svy: tab b5 v106, chi2 col . I also tried that -tab b5 v106, chi2 col
[iweight=wgt]- but to no avail.

How can I run weighted chi2 test? Pls help me..

Thanks in advance

Sai San Moon Lu

try pears instead of chi2.

svy: tab b5 v106, pears col

Bruno
