Dear all members,

I am new to DHS. I am a student on work on Cambodia DHS in domestic violence for my thesis "factors associated with domestic violence in cambodia".

1. Did I have to double weight this data or I have to weigh only the violence weight?

2. I do not understand about (CDHS 2014 report) how the Table 20.8 Marital control exercised by husbands

Percentage of ever-married women age 15-49 whose husbands/partners have ever demonstrated specific types of controlling behaviors, by background characteristics, Cambodia 2014.

How is the number of ever married women determined in this table?

I try to tab it but it does not work.

Bests,

sokha

Dear User,

A good place to begin is by accessing our website and clicking on the link for "data". From there you can click on the link for "Using Datasets for Analysis". That section contains many useful tips including videos for working with our data. In addition, please utilize The Guide to DHS Statistics [http:// www.dhsprogram.com/publications/publication-dhsg1-dhs-questionnaires-and-manuals.cfm](http://www.dhsprogram.com/publications/publication-dhsg1-dhs-questionnaires-and-manuals.cfm) and the Standard Recode Manual <http://dhsprogram.com/publications/publication-dhsg4-dhs-questionnaires-and-manuals.cfm>.

Another great resource for your analysis is the IPUMS website <https://www.idhsdata.org/idhs/>
