Dear DHS Experts,I want to create Water, Sanitation and Hygiene Index (WASH Index) from the variables such as V113,V115, HV237,HV230B, HV232, HV232B,HV226,HV225 and V116 after merging KR File and PR file.I have used FANTA project as a reference for this WASH Index. The WASH Index which was utilized or developed by FANTA project is attached below in this message.

My Question is how can I create the WASH Index from the above listed variables using Stata/SE 14?

How can I deal with the Not applicable (".") and Skip interval to develop the index?

Dear my respected DHS Experts,I need your stepwise commands and codes to develop this Indicator variable.

Again thank you very much for your assistance and guidance!!

With Best Wishes,Hassen

Following is a response from DHS Technical Specialist, Shireen Assaf:

Since this index is not one that we produce in our reports, we cannot give guidance on how to construct it.

Thank you for your reply!

Dear Bridgette and Dr.Shireen Assaf, Even if DHS program didn't produce this index variable, I am asking that How can I create WASH index variable which are similar to the WASH index

Variable created by FANTA Project (attached in message#15166) from DHS Data sets? Dear my respected DHS experts, Again I kindly request your reply for my Question (message #15166). Thank you very much for your assistance and guidance!!
With Kind regards,Hassen
