Hi Everyone,

I'm new to the DHS datasets. I found the state level variable no problem. I'm wondering if there's a way to distinguish the districts that each household belongs to. I have another dataset I want to integrate with the this one. It shows the location of water projects within districts. I'm wondering if the DHS data records the location of its surveyed households below the level of the state. If not, it's no big deal. I just wanted to make the GIS map I'm doing really cool.
