Hello!

I am currently working on a project that is attempting to see if the opinions of couples impact the factors surrounding the circumcision of their daughters. I am using DHS datasets from Benin (2011-2012), Cote D'Ivoire (2011-2012), Ethiopia (2016), Guinea (2012), Kenya (2014), Mali (2012-2013), Niger (2012), Nigeria (2013), Senegal (2016), Sierra Leone (2013), and Togo (2013-2014). To do this, I need to link couples in the DHS datasets into a variable that I can use to compare their opinions and decisions surrounding their daughters. There is a variable for men's opinions (MG119) and on women's opinions (G119) of female genital mutilation, but I am not sure how to connect couples around this variable so that I am not just seeing independent men's and women's opinions.

I would be grateful for any help and insight that anyone has regarding this challenge.

Thank you!

C.

Dear User,
Try searching the forum for keyword "Merging". After reviewing the posts, if you still need assistance, please feel free to post again.
Thank you!

Dear Liz,

Thank you for your reply and help, I have figured out a solution so I'm all good to go.

Best wishes,

C.
