Subject: Tajikistan DHS data
Posted by Malohat on Tue, 28 Aug 2018 03:39:25 GMT

Hello,
I am working on the 2012 Tajikistan DHS data to correlate of stunting. Risk factors are sex of child, age of child, mother's age and educational level, source water, type of toilet, household size etc. I have tried to use the data from personal data. However, I could not find data mother's age and timing of breastfeeding. Could you please let me what file should use for correlation?
Thank you,
Malohat

Dear User, Attached is the description of our datasets. Please refer to this document in order to determine which datasets to use for analysis.
Please state which data set(s)and survey year(s) are part of your analysis. Share your code and look at the following resources:
The Guide to DHS Statistics https://dhsprogram.com/publications/publication-dhsg1-dhs-questionna ires-and-manuals.cfm,
The Standard Recode Manual https://dhsprogram.com/publications/publication-DHSG4-DHS-Questionna ires-and-Manuals.cfm,
using Datasets for Analysis https://dhsprogram.com/data/Using-Datasets-for-Analysis.cfm
and a series of videos to help guide you with your analysis https://blog.dhsprogram.com/dhsdataintro/.
The IUPMS website is also a great resource: https://www.idhsdata.org/idhs/ For specific assistance with Stata, please visit
You may also want to search the forum for [url= http://www.cpc.unc.edu/research/tools/data_analysis/statatut orial/][url]
keywords which might help guide your analysis. After reviewing these resources, if you still have a question, please feel free to post
again. Thank you!
