Hello dear friends and colleagues. I would like to know how to compute the Stunting variable in the 2005 Rwanda Demographic and Health Survey. I thank you for your invaluable help.
Cordially, RR

Thanks a lot, dear DHS user, for your help. Now, I'd like to ask you again for another help. I'd like to find out the relationship between the Intimate Partner Violence and Child and Maternal Health. Could you advise how to proceed, which variables from which file (IR, BR, KR,...) I can consider. If you have some do-files in Stata, I will appreciate.

Thanks again, dear.

RR
