Hi, I'm trying to come up with a logistic regression model for factors associated with unintended pregnancies in adolescent girls aged 15-19 years and young women aged 20-24 years. Can I include the 25-49 years old women as the reference group in my logistic regression model when I'm looking at independent variables like wealth-index, education, and violence?

Thanks, Farwa

hi

Ajit Yadav here in I working on women file and try to estimates Number of pregnancies with an ultrasound tested and Number of pregnancies.

Percentage of all pregnancies to women age 15-49 in the five years preceding the survey for which an ultrasound test was done and percent distribution of pregnancies with an ultrasound test by pregnancy outcome, according to background characteristics, India, 2015-16 table 8.12 In India DHS-4 but i don't find how to do please help me....
