Hello,

I am trying to reproduce the neonatal/infant/under-5 mortality rates shown in the Demographic and Health Survey reports, particularly for the Bangladesh surveys.

I have three files of SPSS syntax. Using these I can replicate the child mortality figures found in BDHS report. But I want to do it in STATA. Does anyone have do files or can help me to translate the SPSS syntax? The syntax files have been attached here.

Dear User,

While I am not a Stata user, I found this link on-line and thought it might be useful to you:

Stata FAQ

How do I do this SPSS command in Stata?
