Dear Sir/Madam,

I am working on Gambia KR6 file and I could not find v023 variable.
Usually I use this code to be able to run the data.

```
gen wgt=v005/1000000  
svyset [pweight=wgt],psu(v021)strata(v023)  
svydescribe
```

Could you kindly suggest me which variable should I put in "strata" ?
Thank you in advance!

Best,
Phyumar
